EDUCATION

ARCHITECTURE
SAL school of Architecture
2020-2022

COMPUTER APPLICATIONS
Manipal University Jaipur
2022-2025

SUMMARY

I am a passionate web developer with a unique background in architecture. Initially, I pursued architecture at SAL School of Architecture, where I excelled in design and project work. However, I soon realized that my true interests lay in exploring new challenges and technologies. My fascination with computers began in school, and once I had access during my studies, I delved into computer languages and programming. My high school friends helped me learn all different computer languages.

During my time in architecture, I collaborated on various projects with my friends on web development and AI, which sparked my decision to shift my focus. I joined a web development course at Manipal University Jaipur, where I honed my skills through solo and collaborative projects. Currently, I'm working on a public transit website, survey reports, and study tools.

As a freelancer, I've developed a wide array of skills that enhance my ability to tackle diverse projects. I thrive in team environments but also enjoy the independence of solo work. My goal is to become a leading web developer and master advanced web development techniques. I believe my background and skills make me a great fit for this position that align with my passion for creativity and innovation.

I'm excited about the prospect of contributing to impactful projects and continuously pushing the boundaries in your company's various projects.
